CEL 51, DCCN, Monsoon 2020
Lab 8: Socket Programming

AIM: To implement Socket Programming and establish a connection between client and server.

THEORY:

Socket programming is a way of connecting two nodes on a network to communicate with each other. One socket(node) listens on a particular port at an IP, while other socket reaches out to the other to form a connection. Server forms the listener socket while client reaches out to the server.They are the real backbones behind web browsing. In simpler terms there is a server and a client.

CODE:

- **server.py** import socket

```
s      = socket.socket(socket.AF_INET, socket.SOCK_STREAM)
s.bind((socket.gethostname(), 8000))
s.listen(5)

while True:
        clientsocket, address = s.accept()
 print(f'Connection established with {address}')
clientsocket.send(bytes('Hello World!', 'utf-8'))
```

- **client.py** import socket

```
s      = socket.socket(socket.AF_INET, socket.SOCK_STREAM)
s.connect((socket.gethostname(), 8000)) msg = s.recv(1024)
print(msg.decode('utf-8'))
```

OUTPUT:

- **server.py**

```
C:\Users\vroon\Desktop\DCC>python client.py
Hello World!
```

- **client.py**

```
C:\Users\vroon\Desktop\DCC>python server.py
Connection established with ('192.168.1.8', 54707)
```

CONCLUSION:

I understood how to successfully establish a connection between client and server using socket programming.
